

FPS - Series Fleet Fueling Panel System

The FPS- series Fleet Fueling Panel System is pre-engineered to simplify the power distribution and controls required for a compliant fleet fueling system.

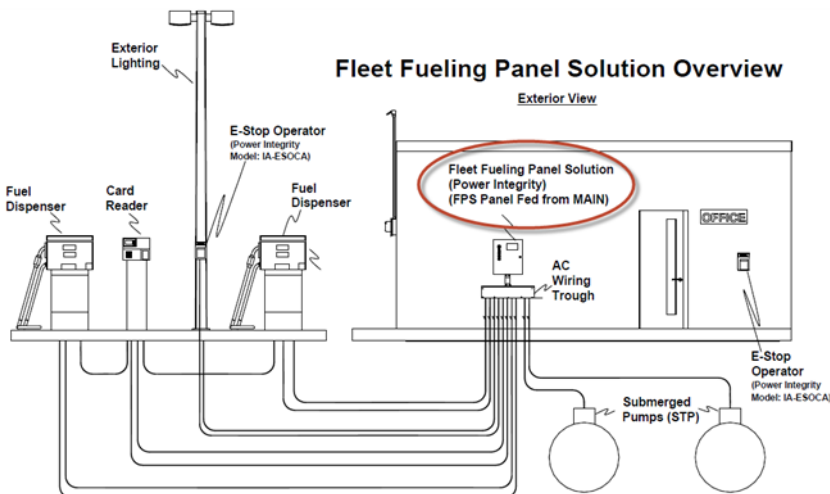

The FPS provides an Emergency Stop system that disconnects the power and neutral conductors, and the **data / low voltage wiring required per the NEC® and NFPA® codes**. All dispenser, pump and card reader circuits are provided with lockable switches so that a device can be properly isolated safely for servicing.

The system is factory wired and provides marked terminals for easy connection of Dispensers, Pumps, Card-Reader, Fleet Fueling Controller, and Tank Monitor.

Each system is sized for the site requirements and includes the necessary Emergency Stop, Pump Isolation, Pump Interface, and Leak Detection controls.

**The FPS Series is
Rated for Outdoor
Installations**
